

# SINGLE LUB 2 APPLICATION SYSTEM

CHEMISTRY  
TECHNOLOGY  
COMPETENCE

## TECHNICAL DESCRIPTION

The **graf** Single Lub 2 Application System offers the most advanced technology for lubricating sewing threads and embroidery yarn of any type with optimized lubricants during the final winding process.

Combined with our high quality Silwa® Lubricants and our long term market experience, we can provide the best solution for all of your sewing thread lubrication needs.

## TECHNICAL SPECIFICATIONS

- *High-precision dosing system for the absolutely precise application of lubricants on any sewing thread during the winding process*
- *Adjustable lubricant pick-up from 0.1% up to 30%, depending on the type of thread*
- *Highest reliability due to the permanently operating Fluid Motion Control System, that stops the spindle in case of failure*
- *Optimized for use on high-speed finish-winding machines with extremely low machine contamination*
- *Minimum maintenance requirements*
- *Highest flexibility due to the small size*
- *Very low power consumption*
- *Specially developed in conjunction with our Silwa® sewing thread lubricants*
